Requires external 5a fuse on 12v
Populate R7 with 120k for LSU 4.9, leave empty for LSU 4.2
R1 is a 1/2 Watt resistor, it is physically larger than the other resistors
R14+R15 sets the contrast of the LCD, the values shown on this schematic is specific to the LCD supplied by 14Point7. Using another LCD may require adjustments to the resistor values R16 sets the LCD backlight brightness

Never connect or disconnect the Lambda sensor while SLC Free is powered
